**CPL and Paradigm will help you develop a long term strategy to manage the impact of COVID-19 on your facilities.**

CPL is committed to working with our community partners during and after this unprecedented health crisis. We understand that your primary concern is for the health and safety of your staff and the people you serve. We share this common goal and we are ready to assist you with facility assessments, building systems reviews, and interior space planning services.

We are also prepared to connect you to our partners at Paradigm Environmental to help you evaluate your cleaning and disinfecting needs in this new era of COVID-19. Paradigm Environmental Services' team of Epidemiologists, Public Health Professionals, and Certified Industrial Hygienists (CIH) can assist you with your Emerging Pathogen Response Plan, cleaning and disinfecting program and verification needs.

Time is of the essence when responding to the range of possible impacts of COVID-19. We will seamlessly assemble the right response team to help you address the interim and post pandemic workplace considerations that are specific to your community. This is not a quick fix, 'band aid' approach, but a thoughtful process to help you address both pressing and future needs.

The response team assigned to your community can be made up of civil, mechanical, electrical and plumbing engineers, that can effectively evaluate your building systems. You may also wish to include interior designers and architects that can evaluate your space needs, identify potential hot spots and offer recommendations for alternative workspace configurations. Our friends at Paradigm can assist with critical cleaning and disinfecting needs. Together, we will help you develop a plan that is unique to your situation.

**We are committed to working with you through and after this crisis.**

---

Let CPL and Paradigm create a custom team to address your interim and post COVID-19 workplace needs.  
**We're in this together.**
